PROJECT BRIEF

REPORT

Project Brief

A supermarket (An Online store) that sells all varieties of items in different categories, from Fashion to Home and Office supplies. They have got a dataset of their shopping over 5 years, from 2015 to 2020. The CEO, would like to see how the supermarket is fairing by certain Key Performance Indicators. The manager, has been assigned the task to identify the key areas within the business that need clarification and get them sorted out as soon as possible.

We are to work as a Data Analyst to analyze the sales dataset and come up with results and visualization.

Tasks

- Total revenue by product category
- Revenue by Year
- Top 5 Product subcategories by revenue
- Product category by Total revenue, percentage of total revenue, total orders and percentage of total orders
- Customers' gender by revenue across the years
- Customers' gender by percentage
- Percentage of revenue by gender across age groups
- Which of the delivery channels have the biggest revenue by percentage?
- Reasons why customers return some of the items purchased
- Which Zone has the highest revenue

Data Structure

The dataset was gotten from the Data Entry officer of the supermarket. The dataset contains records of sales with fields like Order date, Order ID, Delivery date, Customer age, Gender, Delivery type, Product category and etc.

KPIs

The Key Performance Indicators include:

- Total Revenue
- Total Orders
- Total Shipping Fee
- Total Number of Customers and
- The Average Delivery Days of products

Report

Tool: Microsoft Excel

The analysis of the dataset was done using pivot table

--	---------------------------	---	--------------------------	---------------------------------

Insights

6. Out of the total customers of 11300- 58,287 (51.58%) are male while 54,713 (48.42%) are female.
7. The highest percentage revenue (**50.3%**) came from products bought by **males and females between the ages 17 – 34.**
8. The highest percentage of the sales by delivery was through shipment from abroad followed closely by standard delivery.
9. Most of the customers returned products because they were either defective or missing item/parts
10. Zone 3 had the highest sales by revenue followed by Zone 1 at **GHC 46,172,529.95** and **GHC 27,074,121.20** respectively.

Recommendation

1. The top most reason why items were returned id because they were defective, hence the need to properly keep them in store and ensure that they are in good in transit up until delivery to the customer

2. The express delivery channel is the least patronized; this could be as a result of the cost of delivery

3. While mobile phones and electronics drive more in total revenue, Fashion and Health and Beauty are great f or cash flow with the individual order quantity surpassing that of Mobile phones and electronics category combined
